Pool/Spa Chemicals

Safety Data Sheets (SDS) List

The SDS documents contain safety information specific for each chemical and are available from chemical suppliers. The suppliers and manufacturers are required by law to supply these documents. Some manufacturers make the SDS available on their web sites.

Iowa Swimming Pool and Spa Rules require:

- Copies of SDS of the chemicals used at the swimming pool and/or spa are kept at the facility in a location known and readily accessible to facility staff.
- SDS shall be reviewed with the facility staff at least annually; dates of review or training shall be recorded in the pool records.
- SDS match the product labels. If chemicals are switched from one brand to another, obtain the SDS for that specific brand.

Directions: Utilize this document to ensure that chemicals are matched with correct SDS.
