# Introduction

## ***Purpose***

ESF 10 – Hazardous Materials provides support in response to an actual or potential discharge and/or uncontrolled release of hazardous materials when activated. It is designed to fulfill the requirements of the Federal Emergency Planning and Community Right-to-Know Act (Title III, Superfund Amendments and Emergency Management Reauthorization Act of 1986), and responsibilities of Local Emergency Planning Committees/Emergency Management Commissions as established by Iowa Code 29C and Iowa Administrative Rules.

## ***Scope***

This ESF provides for a coordinated response to actual or potential hazardous materials incidents. Response to hazardous materials incidents is generally carried out in accordance with the National Oil and Hazardous Substances Pollution Contingency Plan , 40 Code of Federal Regulations 300.

For purposes of this ESF, “hazardous materials” is a general term intended to mean hazardous substances, pollutants, and contaminants as defined in the National Oil and Hazardous Substances Pollution Contingency Plan. Scott County hazardous materials include chemical, biological, radiological/nuclear substances, whether accidentally or intentionally released, and explosives.

It includes the appropriate actions to prepare for, respond to, and recover from a threat to public health, welfare, or the environment caused by actual or potential hazardous materials incidents.

This ESF may be used under appropriate authorities to respond to actual or threatened releases of materials not typically responded to under the National Oil and Hazardous Substances Pollution Contingency Plan but that pose a threat to public health or welfare or to the environment.

Appropriate response activities to such incidents include, but are not limited to, household hazardous waste collection, monitoring of debris disposal, water quality monitoring and protection, air quality sampling and monitoring, and protection of natural resources.

This ESF is applicable to all departments and agencies with responsibilities and assets to support local and regional response to actual or potential hazardous materials incidents.

Appropriate and prudent elements of this ESF shall be implemented whenever a hazardous or extremely hazardous material release poses an immediate or acute threat to public health and safety, personal or public property, or the environment.

In accordance with the aforementioned guidance the following steps should be taken:

- Assess the potential hazards of a hazardous or extremely hazardous substance incident.
- Reduce the vulnerability of residents in the event of a hazardous or extremely hazardous substance incident.
- Establish capabilities for protecting citizens from the effects of a hazardous or extremely hazardous substance incident.
- Establish those interagency responsibilities, capabilities and organizational structures necessary to facilitate a coordinated public and private sector response to a hazardous materials incident.
- Establish those policies and standard operating procedures necessary to protect the health and safety of public and private sector personnel responding to a hazardous materials incident.
- Provide for the recovery in the aftermath of an emergency involving extensive damage or other detrimental effect on normal life within the community.

## Policies

The policies and authorities for this ESF contained in:

- Public law 99.499 Emergency Planning and Community Right-to-Know Act of 1986. This act has four major provisions:
  - **Section 301-303, Emergency Planning** is designed to help communities prepare for and respond to emergencies involving hazardous substances. Every community in the United States must be part of a comprehensive plan. The Iowa Homeland Security Emergency Management Department is responsible for implementing Section 301-303.
  - **Section 304, Emergency Release Notification (Spill Reporting)**. Facilities must provide an emergency notification and a written follow-up notice to the Local Emergency Planning Committee and the State Emergency Response Commission (for any area likely to be affected by the release) if there is a release into the environment of a hazardous substance that is equal to or exceeds the minimum reportable quantity set in the regulations. In Iowa these reports are made to the Iowa Department of Natural Resources at **(515) 725-8694**.
  - **Section 311-312 Hazardous Chemical Storage Reporting (Tier II)** requires facilities that have a Safety Data Sheet for any hazardous chemicals stored or used in the work place above certain quantities to submit an emergency and hazardous chemical inventory form (TIER II) to the State Emergency Response Commission, Local Emergency Planning Commission, and local fire department. The TIER II form is due annually on March 1st. Approximately 500,000 products have Safety Data Sheets.
  - **Section 313 Toxic Chemical Release Inventory Reporting** requires facilities meeting regulatory requirements to complete a Toxic Chemical Release Inventory Form annually for specified chemicals. The form must be submitted annually to Environmental Protection Agency and the State Emergency Response Commission by July 1. The form covers releases and other waste management of toxic chemicals that occurred during the preceding calendar year.
- Chapter 30.1 - 30.12 Iowa Code 1989, as amended.
- Iowa Administrative Rules Chapter 605 101.1(17a)-103.7(30).
- Iowa Code 567 Chapter 131.

- National Oil and Hazardous Substances Pollution Contingency Plan, 40 Code of Federal Regulations, Part 300.
- Occupational Safety and Health Administration, 29 Code of Federal Regulations, Part 1910.120.
- Comprehensive Environmental Response, Compensation, and Liability Act.
- National Fire Protection Association Recommendations on Transportation, Storage, and Use of Explosive Materials #45.
- Federal Water Pollution Control Act as amended by section 311 of the Clean Water Act and the Oil Pollution Act of 1990.
- Local resolutions.
- Mutual Aid Agreements.
- Contract (s) for hazardous materials response.

*For a terrorist incident involving hazardous materials (to include certain chemical, biological and radiological substances), the primary agencies identified in this ESF provide assistance, investigative support, and intelligence analysis for the hazardous materials response in coordination with the law enforcement and criminal investigation activities.*

*See also ESF 13 – Public Safety and Security.*

*For an incident involving hazardous materials and is determined to be an intentional criminal act but not an act of terrorism, the Environmental Protection Agency assumes primary Federal responsibility for the Federal criminal investigation in accordance with its authorities and applicable laws and regulations.*

## Emergency Planning and Community Right-to-Know

Emergency planning requirements (sections 301-303) are designed to help communities prepare for and respond to emergencies involving hazardous substances. The Quad City Local Emergency Planning Committee coordinates emergency planning and community right-to-know for Scott County. The QCLEPC has designated the Scott County Emergency Management Coordinator as the contact person and day-to-day coordinator for their activities. See LEPC section below.

Every community in the county must be part of this ESF.

*Facilities subject to emergency planning requirements:*

- Any facility with any Extremely Hazardous Substance on-site greater than the relevant Threshold Planning Quantities.
- Any other facility designated as subject to the emergency planning requirements by the Governor of State or the Iowa Homeland Security and Emergency Management Department after a period of public comment.

*Facilities are required to:*

- Cooperate in emergency plan preparation and designate a facility emergency coordinator to participate in the planning process.
- Notify the Iowa Homeland Security and Emergency Management Department and Local Emergency Planning Committee within 60 days of becoming subject to the emergency planning requirements (such as from a shipment or production of an Extremely Hazardous Substance).

### ***State Emergency Response Commission (Iowa Homeland Security and Emergency Management Department)***

The Iowa State Emergency Response Commission was dissolved within Iowa Law in 2017. The duties and the responsibilities of the former SERC are now conducted by the Iowa Homeland Security and Emergency Management Department. The Governor of Iowa has designated the Iowa Homeland Security and Emergency Management Department is responsible for

implementing the Emergency Planning and Community Right-to-Know Act provisions. Those provisions and duties include:

- Establishing procedures for receiving and processing public requests for information collected under the Emergency Planning and Community Right-to-Know Act.
- Reviewing local emergency response plans.
- Designating and recognizing local emergency planning districts.
- Appointing members for a Local Emergency Planning Committee for each district.
- Supervising and consulting on the activities of the Local Emergency Planning Committees.

### ***Local Emergency Planning Committees***

The Quad City Local Emergency Planning Committee must develop an emergency response plan, review it at least annually, and provide information about chemicals in the community to citizens. Plans are developed by the with stakeholder participation.

The committee membership must include (at a minimum):

- Elected state and local officials.
- Police, fire, emergency management, and public health professionals.
- Environment, transportation, and hospital officials.
- Facility representatives.
- Representatives from community groups and the media.

Committee tasks:

- Develop and review the local plan.
- Conduct hazards identification and analysis along with assessing the local response capabilities.
- Develop this ESF appropriate for the county.

- Hold scheduled meetings to establish short and long range plans mandated by the Emergency Planning and Community Right-to-Know Act Section 303(a).
- Provide support and focus on hazardous materials in fixed facilities and transportation routes by performing a hazards analysis or updating the current analysis utilized.
- Appoint a Community Emergency Coordinator who is charged with responsibility for implementing the plan. That CEC is currently designated as the Scott County Emergency Management Coordinator (see below).
- Will keep current lists of available training and training courses available and will request grant funding for hazardous materials training as necessary.
- Shall annually submit the plan to the Emergency Management Commission for review and comment.

### ***Community Emergency Coordinator***

The Community Emergency Coordinator is the administrative coordinator of the Scott County hazardous materials response effort and is the Scott County Emergency Management Coordinator.

Community Emergency Coordinator tasks:

- Responsible for implementation of this ESF.
- Assist Local Emergency Planning Committee in conducting community hazard and response capability assessments.
- Assist the fire chief or designee in making any notifications to the mayor or city administration as needed.
- Work with the Iowa Emergency Management Department, the Iowa Department of Public Health and Iowa Department of Natural Resources to maintain hazardous materials preparedness programs in the jurisdiction.
- Integrating hazardous materials information into the Basic Plan and ESFs.

## ***Local Emergency Management Commission***

The Emergency Management Commission is created under Chapter 29C of the Iowa Code and is comprised of the Mayors, One County Board of Supervisors, and the Sheriff of Scott County, or designees.

The Emergency Management Commission shall review the Basic Plan. Revisions shall be with the concurrence of the Local Emergency Planning Committee.

## ***Emergency Response Planning – Tier II Facilities***

This ESF shall include appendices that (but is not limited to) address each of the following:

- Identification of Tier II facilities. See Appendix 1 – Tier II Facility List.
- Identification of routes (pipelines, railroads, roadways, and waterways) likely to be used for the transportation of extremely hazardous substances to include vulnerable areas prone to accidents along the route. See Appendix 2 – Hazardous Materials Transportation Routes.
  - If roads require closure, alternate routes of travel/detours shall be marked and the public notified. Alternate routes shall be determined by incident commander during an emergency. Any predetermined alternative routes shall be determined by the City Engineer or Public Works Director/Supervisor in the affected community (or communities) and/or the Iowa Department of Transportation and/or the Scott County Engineer.
  - Traffic control will be handled by the local law enforcement agencies and assisted by the Iowa Department of Transportation and the Scott County Engineer.
- Identification of additional facilities contributing or subjected to additional risk due to their proximity to Tier II facilities. See Appendix 3 – Facilities and Populations at Risk (Proximity).
  - Natural Gas Facilities
  - Child Care Facilities
  - Schools and playgrounds
  - Nursing Homes
  - Hospitals

- Retirement Communities
- Shopping Malls
- Private/Public Campgrounds
- Procedures providing reliable, effective, and timely notification by the facility emergency coordinators and the community emergency coordinator to persons designated in the emergency plan, and to the public, that a release has occurred. See Appendix 4 – Public Notification Procedures.
- Methods for determining the occurrence of a release:
  - The only method of determination for EPCRA Section 302 facilities in Scott County is human senses (sight, sound and smell)
- Area or population likely to be affected by such release. The Scott County Geographic Information System (GIS) contains layers of data that identify known and identified special facilities and other at-risk populations, including schools, registered daycare facilities, nursing facilities, etc.
- Description of emergency equipment and facilities in the community and at each facility in the community and identification of the persons responsible for such equipment and facilities. Each first response organization (see primary and support agencies) maintains inventories of the equipment at their facilities. In addition the Iowa Emergency Management Association maintains a matrix of district specialized equipment that is available for deployment. See Appendix 5 – Resource List.
- Evacuation plans including planning considerations and responsibilities. See Appendix 6 – Evacuation Procedures and Routes.
- Shelter in Place Procedures. See Appendix 7 – Shelter-in-Place Procedures.
- Methods and schedules for exercising the emergency plan.
  - The Quad City Local Emergency Planning Committee shall be responsible for exercise planning, with assistance and coordination from the Community Emergency Coordinator and/or his designee and the Emergency Management Coordinator.
  - Schedule of exercises shall be done in coordination with State of Iowa Department of Homeland Security and Emergency Management and their planning for the required cycling of plan revisions, training and exercises.

- Minimally, the QCLEPC (and/or member agencies) will conduct or participate in at least one annual exercise that tests at least a portion of this plan. Ideally, the QCLEPC will conduct one exercise that tests most or all of the parts of this plan annually and minimally, that comprehensive exercise should be conducted at least once every three years.
- Tabletop, functional, and full-Scale exercises will be conducted in accordance with the Homeland Security Exercise and Evaluation Program guidelines.

### ***Emergency Response Planning – Other Facilities***

Numerous businesses and publicly owned facilities such as those listed below also use chemicals which pose a threat to their own private property and employees such as:

- Private public sector teaching and research laboratories.
- Hardware stores and lumber yards.
- Lawn care and garden supply retailers.
- Agricultural product dealers and co-ops.
- Swimming pools and retailers of pool products.
- Service stations and automotive dealers.
- Convenience stores.
- General merchandise retailers.
- Welding equipment supplies.
- Hospitals and clinics, and dentist offices.
- Paint retailers.
- Propane dealers.
- Oil companies.

These threats are to be controlled by the businesses concerned and are not addressed in this ESF unless the spill or release poses a threat to offsite personnel and property or to the environment. Such facilities routinely provide Safety Data Sheets to the supporting fire departments which are

responsible for training of the fire fighters who would encounter these chemicals when fighting fires on private property.

# Situations and Planning Assumptions

## *Situations*

- The potential for a hazardous material accidental release is based on the county's hazard analysis and risk assessment. See the Basic Plan.
- With responders being both rural volunteers and urban-paid, training and equipment varies across the county. Funding of necessary planning and training is limited and, in most cases, will be for the lower level of protective measures at the time.
- In the event of a hazardous materials accidental release, action will be taken by the fire department of that jurisdiction. In all cases outside help will be needed if it is a major hazardous materials incident.
- An event could require protective measures including evacuation and sheltering in place, which may be the only response options appropriate due to equipment and training.
- A warning capability should be established for the use of transportation routes designated to evacuate the population and/or to provide shelter in place instructions.
- In the case of an evacuation, re-entry into the area will be only after qualified personnel are available to make recommendations.
- When responding to an incident county emergency response agencies will normally not be aware of the presence of hazardous materials until they arrive on-scene.
- Initial report of an incident rarely reflects the true nature of the situation. The worst situation must be assumed and an objective on-the-scene evaluation and assessment must be made as soon as possible.
- It may not be immediately possible to identify the hazardous or toxic materials or chemicals involved in the spill.
- Emergency response personnel should always assume the substances are highly toxic, even in small quantities and take protective action.
- Due to the reduced threat of all-out nuclear attack, the most credible scenarios remaining wherein local jurisdictions might be affected by high-level radiation exposure and/or widespread contamination include: terrorist activities, nuclear material transportation accident, and fire/explosion in a facility containing significant quantities of radioactive materials (RAM).

- Scott County is within the 10-mile Emergency Planning Zone (EPZ) of a nuclear power plant (Quad City Generating Station). The risk of an impact resulting from a reactor incident is medium.

### ***Planning Assumptions***

- Regardless of type, size, or complexity of the incident, this ESF will be implemented through the use of the Incident Command System.
- A major hazardous materials incident in the county might result in one or more of the following conditions:
  - Cause multiple serious injuries or fatalities.
  - Require a large scale evacuation.
  - Disrupt normal transportation routes.
  - Cause extensive damage to public or private property.
  - Cause extensive environmental damage.
  - Disrupt normal utility services, i.e. sewer, water, and electricity.
  - Disrupt normal economic, educational, and social activities within the affected community.
  - Affect multiple jurisdictions or political entities.
    - The county could receive the downwind/downstream effects from a hazardous materials release from an adjoining county.
    - An adjoining county could receive the downwind/downstream effects of a hazardous materials release in this county.
    - Within the county, a community could receive the downwind/downstream effects of a hazardous materials release in a rural area.
- Local government has the primary responsibility for the protection and well-being of its citizens. Consequently, local governments, through the designated response agencies, will:
  - Respond to hazardous materials incidents of all types and sizes.
  - Make initial assessments as to the severity or magnitude of the situation.

- Take appropriate first responder protection measures to prevent or minimize injuries and property/environmental damage.
- Determine protective actions for citizens in the risk area, shelter in-place or evacuation.
- The amount of time available to determine the scope and magnitude of the incident (lead time) will impact on the protective actions recommended.
- Private agencies involved in the use, storage and transport of extremely hazardous substances will cooperate with local governments in preparing for and conducting operation in response to hazardous materials incidents.
- A serious hazardous materials incident in the county will require a coordinated multi-agency response including both private and public sector personnel and resources.
- A variety of chemical products are transported through and/or stored at fixed facilities, and planning must accommodate a broad range of hazardous commodities.
- Although the potential exists for a hazardous materials release from a fixed facility, the most likely and potentially most serious scenario would be a transportation accident involving hazardous materials within or adjacent to an urban area.
- Although a broad range of chemicals might be involved in hazardous materials incident, the most likely products in Scott County are:
  - Anhydrous ammonia.
  - Liquefied Petroleum Gas (Propane).
  - Chlorine.
  - Gasoline or other petroleum products.
  - Pesticide or herbicide.
  - Gasoline/Ethanol.
- Locally available resources are in short supply and will require augmentation from mutual-aid agreements, local business donations or agreements, and state or federal assistance.
- Emergency responders lack the equipment and training for all but minor incident accidents.

- Hazardous Material response personnel will be trained in hazardous materials control and vehicles will be equipped with emergency response reference materials, guidebooks and specialized equipment.
- In the event of a peacetime radiological incident, assistance will be available from the state and federal governments and from the nuclear industry to detect radiation, monitor it and predict its spread.
- First responder organizations, particularly fire, medic and law enforcement, will be part of the local radiological emergency support program and should accept appropriate training for such response.
- Based on previous history, the chance of a radiological incident is not a significant threat to people or the environment.
- During radiological incidents, state and federal assistance will be available as well as assistance from the nuclear industry for detection, monitoring, and contamination control.
- Life saving and radiological hazard mitigation decisions will be made at the local level of government.
- Local radiological response personnel may need additional radiological information and technical advice.
- Communication with city, local, state and federal agencies may be difficult as in any emergency situation due overloaded communication channels.
- First responder organizations, particularly fire and law enforcement, will be part of the Scott County Radiological Emergency Support program and should receive appropriate training for radiological response.
- Scott County emergency response agencies, when responding to a transportation incident, may not be aware of the presence of radioactive materials until they arrive on the scene.
- Fixed facilities that produce, process, or store radiological materials should be identified as well as facilities for treatment, storage or disposal of radiological wastes. Hospitals that have nuclear medicine departments should be identified.
- Transportation Routes at risk for transportation incidents lie along highways, rail lines and at airports. Information should be obtained on spent fuel shipment routes and the routes for other radiological shipments. There is also a risk of incidents involving an airplane crash.

- Nuclear weapons are maintained by the United States and a number of foreign powers. The possibility of one or more of these weapons being detonated accidentally or deliberately by terrorists or a full-scale strike against the U.S. should be considered. Even if nuclear detonations were distant from the area, a system would be necessary to detect and access the radiation hazard.

***Note: Off-site planning for radiological incidents at nuclear power plants is treated separately from the Basic Plan and this ESF.***

# Concept of Operations

## ***General***

This ESF promotes close coordination with local, regional, State, and Federal officials, as well as the private sector, to establish priorities for response support. It coordinates the support for and the overall management of the various responses to ensure actions are taken to mitigate, clean up, and dispose of hazardous materials and minimize the impact of the incidents.

Support agencies will increase the need for coordination during the emergency. If the local capabilities are over-taxed, support may come from other regional jurisdictions, State or Federal agencies. The coordination of resources should be directed from the Emergency Operations Center depending on the type and seriousness of the incident.

- Primary and supporting agencies will use their available equipment and supplies unless prior agreements are made for support by other sources.
- The Emergency Management Coordinator with the assistance of the Local Emergency Planning Committee will be responsible for administrative coordination of emergency planning for all hazardous material incidents/accidents.
- All activities will be in accordance with the Basic Plan.
- Emergency incidents/accidents may require activation of the local Emergency Operations Center to provide coordination between agencies. This includes agencies within and outside the county boundaries. It is essential that response agencies understand the Basic Plan, this ESF, the Incident Command System, and Unified Command.

## ***Notification and Activation***

The Scott Emergency Communications Center will receive the initial notification of a release of an extremely hazardous substance via telephone from the fixed facility, from a citizen using the telephone, a law enforcement officer, or first-on-the scene first responder through radio transmissions.

The Communications Center will refer to their Standard Operating Guides for coordinating and cooperating with the Incident Commander at the scene and with the Chief Elected Official in providing warning to the public. The provisions for notifying the public that a release has

occurred is a requirement of the Emergency Planning and Right-to-Know Act. See Appendix 4 - Public Notification Procedures.

To insure proper warning for residents of this county that could be affected by the release of an extremely hazardous substance in another adjoining county, warning procedures are coordinated with the Scott County Emergency Communications Center and emergency management coordinators of adjacent counties by way of a mutual aid agreement.

The initial report of an incident will necessitate an immediate dispatch of the local Fire Department.

At the local and regional-level, this ESF becomes operational upon notification from the Incident Commander. Initial actions coordinated under this ESF include:

- Alert primary and supporting agency members.
- Ensure that the primary agency is ready to support local response activities and to coordinate resources for the Incident Commander as needed.
- Deploy response teams.
- Establish communications.
- Identify initial resource requirements.

The dispatcher will initiate the established initial call list kept in the Communications Center.

Hazardous materials emergencies commonly require mutual aid assistance to ensure coordination of warning procedures with cities or counties affected by a facility's extremely hazardous substance release when located in another county.

Upon identification of actual or potential releases of hazardous materials, the primary agency for this ESF coordinates with the Incident Commander to develop and implement a response strategy.

Upon becoming fully operational and throughout the response period, the Scott County Emergency Operations Center with primary and support agency representatives coordinate to meet response needs. These actions may include communicating management objectives to regional response elements.

The local and regional actions may include:

- Receiving damage information from reconnaissance teams, other supporting agencies, and local, regional, State and Federal agencies.
- Identifying support needs and establishing response priorities in coordination with local, regional, State and Federal agencies.
- Validating priorities and identifying the resources required to meet the needs.

Working with local governments, the private sector and state agencies to maximize use of available regional assets and identify resources required from outside the region.

- Initiating actions to locate and move resources into the incident area.
- Maintaining close coordination with the State Emergency Operations Center to share information and ensure effective response to requests for assistance.
- Continuing to coordinate on-scene response operations at the Incident Command Post.

***Incidents involving Radioactive Materials.***

- Reporting Requirements:
  - Iowa Homeland Security and Emergency Management Department Duty Officer  
Phone (24 hours/day): (515) 979-2200.
  - Iowa Department of Public Health, Bureau of Radiological Health Phone: (515) 323-4360.
  - Iowa Department of Natural Resources Phone: (515) 725-8694
  - Radioactive materials are closely regulated by federal and state laws for reporting, handling, and transporting these kinds of materials.
  - Fixed facilities are required to report their radioactive materials.
  - Highway and railway shipments of radioactive materials are also required to report the material to be shipped, when it will be shipped, and the shipment route to either the Iowa Homeland Security Emergency Management Department, the Iowa Department of Health, or the Iowa Department of Transportation.
- Monitoring Equipment
  - Radiological equipment for local organizations is provided, calibrated and maintained by the Iowa Homeland Security and Emergency Management Department.

- Accident Assessment
  - First on-the-scene responders should follow the appropriate “Action Guides” for radioactive materials found in the North American Emergency Response Guidebook developed in part by the U.S. Department of Transportation. These Action Guides conservatively assume minimal specialized training by first responders; hence, response actions beyond those indicated in this Guide would depend on the particular accident contingencies and the expertise of the responders.
  - Since specialists with the expertise to assess the degree of the radiological hazards in an accident will seldom be at the accident in the initial response phase, provisions should be made for rapid and reliable communication linkages between emergency first responders and the radiological authorities not at the scene.
  - The State of Iowa assists in maintaining a system of Regional Hazardous Materials Teams (Davenport Fire and Bettendorf Fire locally). These regional teams have training that enables their technicians to understand the risks of radiological releases, determine strategies to ensure public safety and expertise in tactics mitigate the release. These teams are deployable directly via Scott Emergency Communications Center. Mutual Aid from other Regional Teams may be requested directly via the Incident Commander.
  - Additional resources to aid in response to a radiological release are available (by the Scott County Emergency Management Agency) via the Iowa Department of Public Health and the Iowa Homeland Security and Emergency Management Department. The Iowa Department of Public Health, Bureau of Radiological Health maintains trained response teams as part of the state Radiological Emergency Response Plan that available to respond to radiological releases and spills. IHSEMD can mobilize resources contained within the Iowa National Guard (71<sup>st</sup> Civil Support Team) and additional federal assets with radiological expertise and capability.
- Protective Actions for the Public
  - The three options for protecting the population are access control, evacuation and shelter. Local officials will implement one or more options, depending on the best available estimate of the disaster situation.
    - Controlling access to the area should be included as a method here. It is the most prudent action to be taken until experts from the Department of Public Health or Natural Resources arrive at the scene.
    - Evacuation will be considered based on the condition of the area to be evacuated, the condition at the selected destination, and any risk of exposure while enroute.

Evacuation operations are discussed in ESF 6 – Evacuation, Mass Care, Housing, and Human Services.

- Sheltering in place will depend on the relative protection afforded by the structures in the community. People will be advised to stay indoors and reduce the airflow into the structure. In-place shelter is discussed in ESF 6 – Evacuation, Mass Care, Housing, and Human Services.
- Decontamination
  - For decontamination procedures for personnel, the responding Hazardous Materials Team will implement decontamination within the limits of their training and expertise. Whenever possible, decontamination strategies should be coordinated with the Iowa Department of Public Health, Bureau of Radiological Health, and the local hospital that has radiological capabilities (Genesis East and Genesis Silvis). The Department of Public Health, Bureau of Radiological Health should be contacted regarding decontamination of facilities, equipment, and the environment.
- Cleanup
  - The responsibility for selecting and implementing the appropriate countermeasures is assigned to the Incident Commander in coordination with appropriate technical resources.
  - The spiller is responsible, according to state and federal law, for the costs of all cleanup and countermeasures. The Incident Commander, in conjunction with requested state and federal resources is responsible for determining these measures and monitoring the cleanup and disposal of contaminated materials.

## ***Roles and Responsibilities***

### *ESF Coordinators*

Each Emergency Support Coordinator (chemical, biological, nuclear/radiological, and explosives) has ongoing responsibilities throughout the preparedness, response, recovery, and mitigation phases of incident management. The role of the coordinator is carried out through a “unified command” approach as agreed upon collectively by the designated primary agencies.

Responsibilities of the coordinator include:

- Pre-incident planning and coordination;

- Maintaining ongoing contact with primary and support agencies;
- Conducting periodic meetings and conference calls;
- Coordinating efforts with corresponding private-sector organizations; and
- Coordinating activities relating to catastrophic incident planning and critical infrastructure preparedness as appropriate.

### *Primary Agencies*

When activated in response to an incident, the primary agency is responsible for:

- Conducting response operations within their functional area for an affected area.
- Providing staff for the operations functions at fixed and field facilities.
- Notifying and requesting assistance from support agencies.
- Managing mission assignments and coordinating with support agencies, as well as appropriate local jurisdictions.
- Working with appropriate private-sector organizations to maximize use of all available resources.
- Supporting and keeping all organizational elements informed of operational priorities and activities.
- Procuring goods and services as needed.
- Ensuring financial and property accountability for activities.
- Planning for short-term and long-term incident management and recovery operations.
- Maintaining trained personnel to support interagency emergency response and support teams.

### *Support Agencies*

When activated in response to an event, threat, or incident, support agencies are responsible for:

- Conducting support operations using their own authorities, subject matter experts, capabilities, or resources;

- Participating in planning for short-term and long-term incident management and recovery operations.
- Assisting in the conduct of situational assessments.
- Furnishing available personnel, equipment, or other resource support as requested by the primary agency.
- Providing information or intelligence regarding their agency's area of expertise.

### *Organizational Structure*

An effective span of control is maintained by consolidating agencies with emergency responsibilities into groups with an internal management structure. Each of the branches is consolidated in the Emergency Operations Center during activation to insure coordination among the various organizations.

Most primary and supporting agencies have only one or two personnel assigned to the Emergency Operations Center during emergencies. Each is assigned a place on the floor plan that corresponds to the ESF in which his/her primary responsibilities lie. Information and mission assignments flow between the branches through the Section Chiefs and from the Section Chiefs through the Emergency Operations Center Director.

This ensures that ESF 5 – Emergency Management is able to maintain an accurate assessment of the disaster situation and is able to develop short-range and long-range planning guidance for use by other potentially affected ESFs within the Emergency Operations Center.

### ***Multiple Response Actions***

When more than one incident occurs or the incident is widespread, multiple local, tribal, State and Federal agencies will be required to support response actions. In cases where Environmental Protection Agency is the primary Federal agency and multiple incident sites or multiple regions are involved, the Environmental Protection Agency may establish an Area Command for Federal Agencies.

Where multiple Environmental Protection Agency regions are involved and there is a need to identify a lead region, the Environmental Protection Agency Headquarters will designate a lead in consultation with the affected regions.

Even when the Environmental Protection Agency establishes an Area Command with regard to Federal Agency resource coordination, the local primary agency will maintain local incident command. The incident starts local and ends local.

### ***Recovery***

Hazardous material recovery begins as soon as response begins. Documentation of all primary and support agency response activities is required during recovery support and ultimately costs reimbursement.

The Scott County Emergency Management Coordinator is responsible for collecting all incident related documentation. Whenever a hazardous material release/spill occurs, the person responsible must initiate clean up, as rapidly as feasible to an acceptable, safe condition.

The cost of cleanup is borne by the person having control over a hazardous substance. If the person having control of a hazardous substance does not cause the cleanup to begin in a reasonable time in relation to the hazard and circumstances of the incident, Scott County may proceed to procure cleanup services and bill the responsible person.

If the bill for those services is not paid within thirty (30) days the County Attorney shall proceed to obtain payment by all legal means. If the cost of the cleanup is beyond the capacity of the County to finance it, the authorized officer shall report to the Board of Supervisors and immediately seek any state or federal funds available for said clean up.

## Primary Agency Functions

Agency	Function
Bettendorf Fire Department	<ul style="list-style-type: none"> <li>• Fire Chief or designee assumes the role of Incident Commander at the Scene.</li> </ul>
Blue Grass Fire Department	
Buffalo Fire Department	<ul style="list-style-type: none"> <li>• Establishes the Incident Command Post and implements the Incident Command System.</li> </ul>
Davenport Fire Department	<ul style="list-style-type: none"> <li>• Determines the severity of the incident and directs response operations.</li> </ul>
Dixon Fire Department	
Donahue Fire Department	<ul style="list-style-type: none"> <li>• Coordinates the activities of all support agencies at the Incident Command Post.</li> </ul>
Durant Fire Department	<ul style="list-style-type: none"> <li>• Performs initial on-scene assessment.</li> </ul>
Eldridge Fire Department	<ul style="list-style-type: none"> <li>• Takes tactical and operational actions regarding fire suppression and other immediate public safety requirements.</li> </ul>
LeClaire Fire Department	
Long Grove Fire Department	<ul style="list-style-type: none"> <li>• The Incident Commander may make decisions based on:               <ul style="list-style-type: none"> <li>○ Harmful nature of materials involved.</li> <li>○ Type, conditions and behavior of shipping container.</li> <li>○ Conditions (location, time and weather).</li> <li>○ Spread of hazardous substances after releases.</li> <li>○ Potential losses versus control measures available.</li> </ul> </li> </ul>
Maysville Fire Department	
McCausland Fire Department	
New Liberty Fire Department	<ul style="list-style-type: none"> <li>• Establishes staging areas upwind at highest elevation.</li> </ul>
Princeton Fire Department	
Riverdale Fire Department	
Walcott Fire Department	

Quad City Bomb Squad	<ul style="list-style-type: none"> <li>• Provides specialized equipment for explosive ordinance disposal operations.</li> <li>• Provides Certified Hazardous Materials Technicians.</li> <li>• Provides explosive detection (bomb sniffing) canine.</li> <li>• Provides a multi-function robotics platform for remote access of dangerous items.</li> </ul>
	<ul style="list-style-type: none"> <li>• Provides Certified Hazardous Materials Technicians capable of operating in contaminated areas.</li> <li>• Provides personnel trained in the use of specialized equipment to handle a wide variety of critical incidents.</li> </ul>
Scott County Health Department	<ul style="list-style-type: none"> <li>• Provides an environmental analysis of the situation and recommends proper epidemiological and toxicological solutions to deal with public health issues concerning hazardous material incident/accidents.</li> <li>• Manages the distribution and use of health resources (personnel, materials, and facilities).</li> <li>• Allocates medical and non-medical supplies in short supply.</li> <li>• Conducts damage assessments.</li> <li>• Based on the assessments, issues guidance to the general public.</li> </ul>
Iowa Department of Public Health	<ul style="list-style-type: none"> <li>• Provides response/support in an incident involving extremely hazardous substances in accordance with the provisions outlined in the Iowa Emergency Plan, Hazardous Substance Spill Plan.</li> </ul>

<p>Radiological Emergency Response Team (RERP)</p>	<ul style="list-style-type: none"> <li>• Provides isotopic identification, sample collection, decontamination operations oversight, determination of appropriate detection equipment and monitoring devices and train response personnel as necessary.</li> <li>• Re-evaluates perimeters based on detection equipment capability and current radiation readings.</li> <li>• Provides recommendations (i.e. public information, protective actions, etc).</li> </ul>
<p>City of Davenport Hazardous Materials Team</p> <p>City of Bettendorf Hazardous Material Team (MABAS 43)</p> <p>Rock Island Arsenal Hazardous Material Team (MABAS 43)</p>	<ul style="list-style-type: none"> <li>• Coordinates with on-site authorities and the Emergency Operations Center.</li> <li>• Decides which public protection actions are appropriate based on the initial phase of the incident</li> <li>• Specifies clear objectives and tactics, (i.e., in-place protecting, [sealing up] or evacuation methods).</li> <li>• Performs rescue of the injured and commencement of evacuation from the exposure area or issues orders to stay indoors.</li> <li>• Coordinates and implements the necessary resources in order to neutralize or contain hazardous materials or waste with or without a fire.</li> <li>• Manages immediate containment requirements, if necessary.</li> <li>• Briefs the medical, law enforcement and other authorities on the hazard evaluation and environmental assessment.</li> <li>• Provides staff support to the Emergency Operations Center.</li> <li>• Requests necessary support by type (technical assistance, manpower and equipment, etc.)</li> </ul>

	<ul style="list-style-type: none"><li>• Provides assistance in search and rescue operations.</li><li>• Maintains records of all persons in the exclusion area.</li><li>• Provides for decontamination of personnel and equipment.</li><li>• Supports the Incident Commander at the Incident Command Post.</li></ul>
--	---

## Support Agency Functions

Support agency representatives will provide technical expertise, personnel, teams and equipment in support of a hazardous materials incident. Personnel assigned in support of the incident will maintain close coordination with Incident Command Post representative.

*Note: Support agencies are not listed in order of priority. They are all in support of the primary agency.*

<b>City/County/ First Responder Agencies</b>	<b>Functions</b>
911 Communications	<ul style="list-style-type: none"> <li>• Emergency telecommunicators will follow the Basic Plan as directed by the Incident Commander in the event of a chemical hazard incident.</li> </ul>
Scott County Conservation Board	<ul style="list-style-type: none"> <li>• Assists in coordinating response efforts when public lands or waters under jurisdiction of the Conservation Board are threatened by a hazardous materials incident.</li> <li>• Provides public awareness of the consequences of hazardous or extremely hazardous materials releases and the county response through existing environmental education programs.</li> </ul>
Scott County Emergency Management Agency	<ul style="list-style-type: none"> <li>• Ensures the Basic Plan is implemented to provide the unique skills and capabilities required for emergency operations within the various departments of local government with regard to a hazardous materials spill/release.</li> <li>• Coordinates with the Incident Commander to provide emergency response agencies such as law enforcement, fire fighting and medical/rescue in response to a hazardous materials incident.</li> <li>• Briefs local, tribal, state and federal officials as to the</li> </ul>

	<p>situation.</p> <ul style="list-style-type: none"> <li>• Ensures a resources list is used; including contracts and agreements to support a hazardous materials spill/release.</li> <li>• Coordinates technical assistance for hazardous material risk assessments.</li> </ul>
<p>Scott County Engineer's Office</p>	<ul style="list-style-type: none"> <li>• The public works/roads and bridges agency shall assist in necessary road closures, detours and establishment of control zones.</li> <li>• Ensure coordination with Iowa Department of Transportation on state road closures.</li> <li>• County Engineer will work with the Incident Commander to coordinate evacuation of personnel within the affected area.</li> <li>• Place signage on the roadway to notify evacuees regarding safe passage evacuation routes.</li> <li>• Provide technical assistance and resources to support hazardous materials containment activities.</li> <li>• Water and sewer department shall be responsible for providing remedial actions when a hazardous material may affect water sources and distribution system and assist in product analysis.</li> <li>• Coordinates and establishes procedures for disposal of hazardous materials/waste.</li> <li>• Coordinates for the posting of contaminated areas.</li> <li>• Assists fire departments with decontamination efforts.</li> <li>• Coordinates for utilities and other services essential for basic human needs.</li> </ul>
<p>Scott County Sheriff's</p>	<ul style="list-style-type: none"> <li>• Establishes incident boundaries, access control points in</li> </ul>

Office	<p>accordance with Command Post guidelines.</p> <ul style="list-style-type: none"> <li>• Provides for warning support and coordinates evacuation to sheltering areas or pick-up points.</li> <li>• Provides the Emergency Operations Center, Command Post, and Incident Commander with the communications link in disseminating industrial emergency notification of releases of hazardous substances through the public address system.</li> <li>• Provides mutual aid assistance for the coordination of effective traffic control.</li> </ul>
<p>City of Davenport Police Department</p> <p>City of Bettendorf Police Department</p> <p>City of Blue Grass Police Department</p> <p>City of Buffalo Police Department</p> <p>City of Dixon Police Department</p> <p>City of Donahue Police Department</p> <p>City of Eldridge Police Department</p> <p>City of LeClaire Police Department</p> <p>City of Walcott Police</p>	<ul style="list-style-type: none"> <li>• Establishes incident boundaries, access control points in accordance with Command Post guidelines.</li> <li>• Provides for warning support and coordinates evacuation to sheltering areas or pick-up points.</li> <li>• Provides the Emergency Operations Center, Command Post, and Incident Commander with the communications link in disseminating industrial emergency notification of releases of hazardous substances through the public address system.</li> <li>• Provides mutual aid assistance for the coordination of effective traffic control.</li> </ul>

Iowa Department of Transportation	<ul style="list-style-type: none"> <li>• Serve as advisors to the Local Emergency Planning Committee in matters pertaining to the transportation of hazardous materials.</li> </ul>
Iowa Homeland Security and Emergency Management Department	<ul style="list-style-type: none"> <li>• Responsible for the overall emergency coordination of state assistance if a multiple state agency response is required.</li> <li>• May establish a forward command post for preparation, response and recovery in an incident.</li> </ul>

Iowa National Guard	<p><b>71<sup>st</sup> Civil Support Team:</b></p> <ul style="list-style-type: none"> <li>• Responsible for State Terrorism Response support in areas of chemical, biological, radiological detection and identification.</li> <li>• Provides communications capabilities and mobile laboratories.</li> <li>• Can provide decontamination capabilities.</li> </ul>
Iowa State University	<p><b>Department of Environmental Health and Safety:</b></p> <ul style="list-style-type: none"> <li>• Serves as technical advisors to the Local Emergency Planning Commission local response organizations.</li> <li>• Provides technical advice on the toxicological properties of chemical products.</li> <li>• Provides technical advice on risk assessment.</li> <li>• Provides technical advice on applicable regulations concerning industrial hygiene, and chemical safety.</li> </ul> <p><b>Department of Occupational Medicine Personnel:</b></p> <ul style="list-style-type: none"> <li>• Serves as technical advisors to the Local Emergency Planning Committee and local response organizations.</li> <li>• Provide technical advice on medical evaluation and monitoring of hazmat response personnel.</li> <li>• Provide technical advice on the long and short term health effects exhibited by specific substances.</li> </ul>
<b>Federal Agencies</b>	<b>Functions</b>
Ames Laboratory, US Department of Energy	<ul style="list-style-type: none"> <li>• Serve as technical advisors to the Local Emergency Planning Committee and local response organizations.</li> </ul>

	<ul style="list-style-type: none"> <li>• Provide technical advice on the toxicological properties of chemical products and radiological materials.</li> <li>• Provide technical advice on Risk Assessment.</li> </ul>
Environmental Protection Agency	<ul style="list-style-type: none"> <li>• Coordinates federal funding, equipment, personnel and expertise during major ground/air toxic incidents and land water spills.</li> <li>• Regional Response Team may be requested, and activated by the state.</li> <li>• Regional Response Team will coordinate with federal and local governmental agencies through the state.</li> <li>• Federal coordinator may assist the state in integration into local government and the private sector.</li> </ul>
Federal Emergency Management Agency	<ul style="list-style-type: none"> <li>• During a Federal Presidential Declared Disaster the Federal Emergency Management Agency works with local government during the recovery phase of the incident.</li> </ul>
National Animal Health Complex	<ul style="list-style-type: none"> <li>• Serve as technical advisors to the Local Emergency Planning Committee and local response organizations.</li> <li>• Provide technical advice on the toxicology properties of infectious agents.</li> <li>• Provide technical advice on risk assessment.</li> </ul>
National Response Center	<ul style="list-style-type: none"> <li>• Establishes the <b>Domestic Preparedness Chemical/Biological Hotline</b> in conjunction with Department of Defense and the Department of Justice.</li> <li>• Takes reports via the toll-free number on potential or actual domestic terrorism and coordinates notifications and response with the Soldier and Biological Chemical Command and the Federal Bureau of Investigation.</li> </ul>

	<p>For the <b>Environmental Protection Agency:</b></p> <ul style="list-style-type: none"> <li>• Receives incident reports under the Federal Response System which is supported under the Comprehensive Environmental Response, Compensation and Liability Act, Clean Water Act, Clean Air Act, SARA Title III, and the Oil Pollution Act of 1990.</li> <li>• Disseminates telephonic and electronic (fax, email) reports of oil discharges and chemical releases to the cognizant Environmental Protection Agency Federal On-Scene Coordinator.</li> </ul> <p>For the <b>Federal Emergency Management Agency:</b></p> <ul style="list-style-type: none"> <li>• Acts as a 24 hour contact point to receive earthquake, flood, hurricane, and evacuation reports.</li> </ul> <p>For the <b>Nuclear Regulatory Commission and the Department of Energy:</b></p> <ul style="list-style-type: none"> <li>• Makes telephonic notification of all incidents involving radioactive material releases to the environment.</li> </ul> <p>For the <b>Department of Defense:</b></p> <ul style="list-style-type: none"> <li>• For incidents involving transportation emergencies with Department of Defense munitions or explosives are recorded and referred for action to the Army Operations Center.</li> <li>• For transportation anomalies involving hypergolic rocket fuels and oxidizers are recorded and immediately passed to the Air Force Operations Center.</li> </ul>
<b>Other</b>	<b>Functions</b>
American Red Cross	<ul style="list-style-type: none"> <li>• Responsible for mass care and shelter management.</li> </ul>

## **ESF Development, Testing, and Maintenance**

The Quad City Local Emergency Planning Committee shall be responsible for exercise planning with assistance and coordination from the Community Emergency Coordinator or designee and the County Emergency Management Agency Coordinator.

At a minimum, the exercises will be conducted according to the Iowa Homeland Emergency Management Department requirements.

The Quad City Local Emergency Planning Committee is responsible for ensuring scheduling, designing, conducting, and evaluating of all exercises.

Recommended changes to this to this ESF shall be forwarded to the Quad City Local Emergency Planning Committee. Revisions to this ESF are made annually, with draft revisions submitted to the Iowa Homeland Security and Emergency Management Department as part of annual plan revision requirements on August 1 of each year. As revisions are made, revised and dated, changed pages (or the entire ESF) will be provided to all individuals and agencies involved with the execution or support of this ESF.

It is the responsibility of the copy holder to keep individual printed copies current.

### **Appendices**

Appendix 1: Hazardous Materials Transportation Routes

Appendix 2: At-Risk Populations

Appendix 3: Public Notification

Appendix 4: Shelter-in-place and Evacuation

Appendix 5: Tier II and EHS Facilities

## **Appendix 1: Hazardous Materials Transportation Routes**

It is assumed that hazardous materials and extremely hazardous substances are transported through and within Scott County on a daily basis. Multi-modal transportation is widespread throughout the region and includes: fixed underground pipelines, active rail lines and spurs, river barge activity, interstate and state highways, county and city roads and streets.

The transportation of extremely hazardous substances in virtually all forms (gaseous, liquid and solid) within Scott County poses a constant threat and risk, especially to communities that are located within five miles of major thoroughfares and highways, active rail lines and the river.

Identification of the exact types and quantities of those hazardous materials is virtually impossible in real time. While such data is reportable, the information is typically summary in nature, as is reported on a monthly or annual basis. However, that is gathered and shared with QCLEPC partners (especially fire and hazmat agencies) which aids and drives planning, training and exercising.

The most likely truck routes where hazardous substances can be found most commonly include: Interstate 80, Interstate 280, Interstate 74, US Highway 61, US Highway 67, Highway 22, and, Highway 927 (old US Highway 6). The locations with the most potentially hazardous features along those routes include: the intersections of 1-280/1-80; Highway 61 and 1-80; Highway 67 and 1-80; Highway 22 and 1-280; 1-74 and 1-280; the bridge on the Mississippi River at State Street and 174 in Bettendorf; the bridge on the Mississippi River at Highway 67 and 2nd Street in Davenport; the bridge on the Mississippi River at 1-80 and Highway 67; and, the bridge over the Wapsipinicon River on Highway 61.

Most rail activity occurs from three carriers: CP Rail, BNSF and Iowa Interstate. All three carriers operate lines that can be found along and near the Mississippi River and lines that exit downtown Davenport, traveling west out of the city on a route that takes them through western Scott County toward Stockton, IA (Muscatine Co.) and Durant, IA (Scott and Cedar Co.). There are two active river rail crossings in Davenport, the Government Bridge (at Lock and Dam 15) and the Crescent Bridge (west of downtown). River crossing present increased risk due to the susceptibility of the bridge structure itself as well as the logistics presented by any response on, in or near the water.

Obviously, barge and river traffic that pose significant risk from hazardous materials is found in the navigable channel of the Mississippi River. Thousands of tons of materials are transported via barge each year, typically during the spring, summer and fall. Most years, barge traffic halts for several months when the river ices during the coldest months. While

much of the cargo is reasonably safe, with large quantities of inert and/or stable materials such as sand, gravel and harvested grain, manifest summaries also show hazardous materials as well, including large quantities of anhydrous ammonia and petroleum products. River transportation has the greatest risk in and around lock and dam activities (including breaking and reforming barge groupings to traverse the lock systems) near Locks and Dam 14 (south of Le Claire) and Locks and Dam 15 (in Davenport). Other risks are presented from potential collisions with other vessels or encounters with unseen or unknown underwater obstacles and objects.

Several pipelines are located within Scott County that transport hazardous and flammable substances, including natural gas, liquid petroleum gas and other liquid petroleum (fuel) products. The Scott County Geographic Information system contains a location layer for all identified pipelines within Scott County. A print of that map is also located at the Scott County Emergency Operations Center. Each fire district receives information about pipelines that may impact them on an annual basis. Pipeline operators offer training for all local fire agencies that includes awareness, safety and mitigation techniques. The Scott Emergency Communication Center has contact information for all operators and pipelines are marked with warning signs and emergency contact information near all road crossings.

The most potentially hazardous points in the highway system routes are at the intersections of 1-280/1-80; Highway 61 and 1-80; Highway 67 and 1-80; Highway 22 and 1-280; 1-74 and 1-280; the bridge on the Mississippi River at State Street and 174 in Bettendorf; the bridge on the Mississippi River at Highway 67 and 2nd Street in Davenport; the bridge on the Mississippi River at 1-80 and Highway 67; and, the bridge over the Wapsipinicon River on Highway 61.

## Appendix 2: At-Risk Populations and Facilities

Hazards and risks from hazardous substances and chemical present unique challenges to at-risk populations and many facilities in our community. At risk populations are more vulnerable due to any number of factors including, but not limited to:

- Difficulty to mobilize in the event of evacuation;
- Differing communications challenges;
- Increased vulnerability and susceptibility to toxicity and airborne pollutants;
- Challenges with self-identification by individuals with special needs;
- Need and desire for independent living;

These factors may require additional time and effort to ensure the safety of these individuals and facilities when and emergency is declared. Additional information is contained in ESF-6 Mass Care and Sheltering.

It is the intent of the Quad City LEPC, to use mapping tools to aid in the recognition of areas where at-risk populations are most vulnerable to the potential risks from both fixed facilities as well as transported hazardous materials. Currently the Scott County GIS system contains data pertaining to at-risk populations and facilities. We are able to import data pertaining to reported Tier II facilities. The Quad City LEPC is currently working to combine that data to identify risk zones and risk facilities. That data can then drive future planning and help at-risk individuals and facilities to prepare plans to react to a hazardous materials emergency. This information will also aid responders in understanding where transportation and assistance resources may be needed to ensure safety or to expedite evacuation.

## **Appendix 3: Public Notification**

### **Community Right to Know**

The Quad City Local Emergency Planning Committee is charged with providing information to the community and with satisfying the requirements for the Community Right-to-Know regarding the presence of hazardous materials and chemicals and the risks they present within Scott County. That communication is provided in numerous forms:

- Quarterly LEPC meetings which are open to the public, with agendas posted physically and via the Scott County EMA website;
- Publishing annual notice of the LEPC, the tentative annual schedule of LEPC meetings and the location of said meetings;
- Providing information (upon request) regarding reported facilities operating in Scott County, their location and the materials/chemicals stored and in use.
- Notifying the public regarding emergent situations where more immediate hazards exist and advising precautionary and protective actions.

### **Emergency Notification of the Public**

Incident Commanders, along with the Quad City Local Emergency Planning Committee, Scott Emergency Communication Center and the Scott County Emergency Management Agency have several tools available to aid in and effectively accomplish notification of the public regarding emergent situations regarding hazard substances (and other hazards as well). Those tools are utilized in a manner deemed appropriate by the Incident Command, LEPC, SECC, EMA and the jurisdiction(s) impacted in order to quickly and effectively provide the appropriate information to the affected portions of the community. The content of emergency messaging may include:

- A description of the hazard, its location, the size, scope and expected duration of the hazard and the possible impacts to the community and to public health;
- Precautionary steps individuals and business can take to safeguard or ensure their safety;
- Protective actions deemed necessary to quickly mitigate or avoid the hazard. Those protective actions may include:
  - Evacuation
  - Shelter-in-place
  - Decontamination
  - Other protective measures;
- Information regarding when the hazard has been eliminated, neutralized and/or mitigated;
- Other information as deemed pertinent to the situation.

The Incident Commander, SECC and EMA, acting on behalf of the responsible party, the jurisdiction with authority and the LEPC have numerous channels or means to communicate emergency information to the public. Those channels will be utilized as deemed necessary to quickly and effectively communicate the necessary information to the public. Those tools and channels include:

- The use of public media outlets to communicate information included in a press release or similar instrument;
- The Emergency Alerting System (EAS) to provide emergency notification via television and radio;
- AlertIowa!, the State of Iowa mass notification system that is available for all counties to utilize for public notification. AlertIowa! has the capability to notify via telephone (voice messaging), text messaging and e-mail messaging. AlertIowa! also provides access to FEMA's Integrated Public Alert Warning System (IPAWS) which links numerous disparate warning systems via one platform. Those systems include:
  - Emergency Alerting System
  - Wireless Emergency Alerting (WEA) via capable cellular devices
  - NOAA's Weather Radio System
- The National Oceanic and Atmospheric Administration's Weather Radio System via the Quad Cities Office of the National Weather Service;
- Mobile Route Alerting where emergency services (fire and police) alert the public using siren and public address capabilities in emergency vehicles;
- Door to door notification by fire and police;
- Other means as deemed necessary and effective;

## **Appendix 4: Shelter-in-Place and Evacuation**

In the event of a hazardous materials incident, the incident commander shall be responsible for determining recommended actions for the public to best ensure their safety and to protect public health. The two most likely recommendations are to “shelter-in-place” or “evacuation”.

### **Considerations**

The incident commander quickly consider many factors in making recommendations to the public. First response agencies receive specific training regarding response and protective actions to mitigate the hazardous material emergency, keep first responders safe and to protect the public. Some of those factors include:

- The type of chemical or material involved and its physical properties and hazards;
- The location of the emergency and its proximity to occupied structures, transportation routes and persons;
- Wind speed and direction (for gaseous substances);
- Terrain and topography (for liquids);
- Ground water and drainage;
- Time factors (emergent speed of the hazard versus the time to evacuate or take shelter);

Each incident is unique and there may be numerous other considerations for the incident commander to evaluate and that might influence response and protective recommendations. The incident commander will use the methods of public notification or other means to notify the affected areas of any recommended protective actions.

### **Shelter-in-Place**

In a chemical or other emergency where air safety is affected, Shelter-in-Place keeps you inside a building and out of danger. Sheltering-in-Place simply means staying inside the building you are already in, whether it’s your home, business or other facility, or seeking shelter in the nearest available building. In some cases of a chemical emergency, Shelter-in-Place is your safest defense.

Once the recommendation for Shelter-in-Place has been issued, the public will be advised to not stay indoors until official notification that the danger has passed. Again, this information will be disseminated via one or more public notification channels.

### **How to Shelter-in-Place**

- In public buildings, the building operators should set all ventilation and HVAC systems to 100% recirculation so that no outside air is drawn into the structure. Where this is not possible, ventilation systems should be turned off. Homeowners should do the same in their homes.
- Minimize the use of elevators in buildings. These tend to “pump” outdoor air in and out of a building as they travel up and down.
- If possible, bring outdoor pets inside.
- Close all doors to the outside and close and lock all windows (windows sometimes seal better when locked). If possible, remove fans and window air conditioner units from windows. Close all storm windows.
- Close fireplace dampers.
- Turn off all exhaust fans in kitchens, bathrooms and other spaces.
- Cover and seal window-type air conditioners, exhaust fan grilles, range vents, dryer vents and other gaps and openings to the outdoors to the extent possible (including any obvious gaps around external windows and doors) with tape and plastic sheeting, wax paper, aluminum wrap or any suitable material. Wet towels or blankets may be effective for sealing gaps under doorways and windows.
- Close as many internal doors as possible in your home or other building.
- If an explosion is possible outdoors, close the drapes, curtains, and shades over windows. Stay away from external windows to prevent potential injury from flying glass.
- If the gas or vapor is soluble or even partially soluble in water - hold a wet cloth or handkerchief over your nose and mouth if the gasses start to bother you. For a higher degree of protection, go into the bathroom, close the door, and turn on the shower in a strong spray to “wash” the air. Seal any opening to the outside of the bathroom as best you can. Don’t worry about running out of air to breathe. That is highly unlikely in normal homes and buildings.
- Tune into the Emergency Alert System on your radio or television for further information and guidance. You may be instructed to seek the highest or lowest area in the house, depending on the chemical. You also may be instructed to turn off water intake as water supplies may be affected.
- Do not go outside or attempt to drive
- DO stay inside your place of business or in your home or in another enclosed building until the plume of toxic vapors passes outside. Listen to your radio or television.

### **Evacuation Decisions**

Shelter-in-Place is recommended when the projected toxicity of the release does not justify evacuation or when the risks and threats associated with the movement and evacuation of residents outweigh the benefits. In many circumstances, effective protection can be found in home or other facilities.

Large scale evacuations in response to toxic gas or vapor hazards are best considered when:

- There is strong potential for a toxic discharge, the discharge has not yet taken place, and there appears to be time available to relocate people, or;
- The discharge has taken place but people are sufficiently far downwind to permit time for evacuation, or;
- People not yet in the direct path of a cloud or plume are threatened by a future shift in the wind direction, and;
- The safety hazards of evacuation are outweighed by benefits of the action, and;
- Telling people to shelter-in-place might not fully protect them from serious consequences.

The overall responsibility for issuing evacuation orders rests with the chief elected official of the affected political subdivision, or the incident commander acting on behalf of the chief elected official. In nearly all cases, the on-scene command authority can make a decision to evacuate when there is an immediate need in order to protect lives and provide public safety. Support efforts will be carried out and assisted by law enforcement with support from Scott Emergency Communication Center and the Emergency Operations Center (if activated).

### **Evacuation Logistics**

Evacuation orders and instructions shall be implemented in an orderly and organized manner, with consideration given to recommended evacuation routes, the size of the evacuated population, the time allowed, moving away from the hazard, the expected duration of the evacuation and other considerations. In addition, consideration must be given to special facilities and populations when considering evacuation. There may be individuals or groups that are unable to evacuate without assistance and may require resources (buses or accessible vehicles) to evacuate. Lastly, evacuated persons may require shelter and feeding resources (see ESF-6) if the duration of the evacuation exceeds more than a few hours. The incident commander shall, in conjunction with all available transportation, sheltering and feeding resources and subject matter experts, strive to address all pertinent issues when considering and implementing evacuation. Incident command should always consider evacuation instructions (recommended routes, shelter locations, communication channels, etc.) and, at minimum provide basic information (how to communicate with the jurisdiction and get additional information or ask questions) for the evacuees if time permits.

If evacuation orders are considered for any area larger than a small area (one or two city blocks) specific instructions for evacuation routes should be planned and communicated to avoid traffic issues that can negatively affect evacuation time and put persons in potential danger.

## **Appendix 5: Tier II Facilities**

The following pages list facilities that have made the required reports to the Iowa Department of Natural Resources and the Scott County Emergency Management Agency regarding regulated extremely hazardous substances and/or Tier 2 chemicals in reportable quantities. As the ESF states elsewhere, this is NOT an exhaustive list of hazardous materials in the community. Many facilities and even residences may contain substances that can be hazardous to the community, causing health and safety issues.

This list is published to increase awareness and for planning purposes to acknowledge those locations and facilities where the highest potential risks or hazards are located, based on the substance stored or used there. This list does NOT indicate that there is currently an immediate hazard at the listed locations. It does NOT indicate that it is unsafe to be at or near these facilities. It is expected that all listed facilities utilize and implement the required precautionary steps (planning, mitigation, response, etc.) to handle and keep safe the substances that they have in their possession, in accordance with all industry standards and federal, state and local rules and regulations.

The facilities in the following lists are required to communicate their hazards to the Iowa Department of Natural Resources and/or to the local fire agency in which they are located and provide the opportunity for the local fire authority and Fire Marshall to inspect and become familiar with the facility and have input into their emergency planning process.
